

# MONITORING NETWORK PRINTERS

## What is network printer monitoring in eAuditor?

Network printer monitoring is a comprehensive solution that supports the management of printing devices. The printer monitoring function allows you to automatically read information about current printer alerts, allows you to verify the actual status of toners, as well as read the status of all printers available on the network.

## WHY USE THE MONITORING FUNCTION NETWORK PRINTERS?

- ✔ Ability to verify actual toner usage,
- ✔ reading information about current printer alerts,
- ✔ easy access to the manufacturer's interface for printer management,
- ✔ reading the statuses of printers available on the network,
- ✔ ability to configure notifications of current printer errors,
- ✔ verification of the minimum, maximum, and average response time of the printer service.

## MONITOR THE STATUS OF YOUR DEVICES IN REAL-TIME

With the ability to read printer alerts in real-time, IT administrators can monitor the status of devices across the organization in real-time. In addition, they can configure notifications about current printer errors.

## EFFECTIVELY MONITOR PRINT DEVICES

Monitoring network printers significantly supports IT administrators in managing printing devices. Administrators gain the ability to verify actual toner usage, as well as information on maximum toner capacity. In addition, thanks to the SNMP scanner, data about printing devices is always kept up-to-date.

## READ DETAILED INFORMATION ABOUT PRINTERS

The network printer monitoring function optimizes IT administrators' time. Detailed information about all printing devices in the organization is located in one place in the administration console. Administrators with one click of the device's IP can move to the management panel, where accurate information about the printers is.

**General** - basic information about the printer, errors, notifications, and available ports.

**Consumption** - information about the printer's marker technology and consumption of its resources.

**Details** - detailed information about the printing devices, including data about memory and network interfaces networks.
